EXHIBIT 25

UNITED STATES DISTRICT COURT

EASTERN DISTRICT OF LOUISIANA

KATHLEEN MOLLER VS. MARTIAN SALES, INC.; JOPEN, LLC, A TEXAS LIMITED LIABILITY COMPANY; JOHNSON FOODS, LLC, A WYOMING LIMITED LIABILITY COMPANY; LP IND., LLC, A WYOMING LIMITED LIABILITY COMPANY; CAG HOLDINGS, LLC, A WYOMING LIMITED LIABILITY COMPANY; RMH HOLDINGS, INC., A WYOMING CORPORATION; ABC INSURANCE COMPANY AND JOHN DOES 1-4.	CIVIL ACTION NO. 24-0028-WBV-DPC

Video Deposition of WINSTON H. GANDY, JR., MD, FACC, FASE, taken on Friday, February 13, 2026, via Zoom videoconference.

(Reporter complies with counsel's request.)
BY MS. HICKMAN:
Q Okay. My question to you now is: Did you, when you were coming to the cause of death in Harmony, in the case we're here for today, with regards to Harmony Moller, did you consider that mitragynine could have caused or contributed to a ventricular arrhythmia?
A Yes, I considered it.
Q Yet you don't know one way or the other that it's possible?
A Well, we're here and I was asked to opine on causation and the cause of death. And QT prolongation and subsequent cardiac dysrhythmia is a possibility. And in the context of that and the other drugs that were found, what I considered is the QT prolongation regardless of the etiology of that. That's just one possible mechanism of sudden cardiac death.
Q Okay.
A And I did consider it.
Q Do you believe, as we sit here today, that it is possible that kratom causes cardiac

arrhythmia?

A I think anything is possible. And, yes, it is possible.

Q Okay. In this case, you're saying now that you did consider that mitragynine could have caused a cardiac arrhythmia in Harmony Moller?

MS. CONGER:

Object to form. Mischaracterizes testimony.

THE WITNESS:

I will say to you that I considered it as well as everything in this case. I was more interested in arriving at more likely than not and which I felt was the cause of death. There are a lot of things on board, but, yes, I considered QT prolongation regardless of the cause.

BY MS. HICKMAN:

Q Okay. And we are going to get to your opinions. Like I said, I am absolutely going to come to your report, and we're going to go through it paragraph by paragraph. But you would agree with me

A As a consequence of an ischemic cardiomyopathy, the underlying etiology of that is the anomalous origin of the left main coronary artery.
The other contributing factor would be a hypertrophic cardiomyopathy or non-ischemic cardiomyopathy that was the underlying cause and substrate between the two such that the one critical factor here is the fibrosis in the myocardium and the hypertrophy, which is really the link, if you will, to a sudden cardiac event. And, as such, the cause of death, I believe, more likely than not, is the anomalous origin of the coronary artery, which was there from birth, and subsequent hypertrophic cardiomyopathy, which, in and of itself, by itself, either one of the two of those would have a more likely than not to have caused it whether or not any other circumstances were present.
Q Okay.
A And that all the other drugs that were on board, including kratom, that had the potential to prolong the QT interval, in my

opinion, did not cause it, and if anything, either made it easier for the arrhythmia to occur. But either way, it was the underlying substrate that was necessary for this event to occur.

Q Okay. We're going to come to the hypertrophic cardiomyopathy in a moment. Okay? I'm not quite there yet. But, you know, I'm not a doctor. You got that by now.

The arrhythmia is -- we agree, again, that is the -- what caused the moment of death, correct?

A Yes.

Q Okay. And you do not dispute, as you said a moment ago, that there is potential for kratom to cause cardiac arrhythmias, correct?

MS. CONGER:

Object to form.

THE WITNESS:

There is a potential, that is correct.

BY MS. HICKMAN:

Q Correct. And so while your opinions that

A Your question doesn't make sense.
Q Okay. Wrapping up here, you're not aware of any medical literature that says that kratom is safe or effective for any medical purposes, correct?
A Correct.
Q You, in your capacity as a cardiologist or a medical director at a substance abuse rehabilitation facility, have never advised a patient to use kratom?
A I have not.
Q While you believe more likely than not the cause of Harmony's death is due to her CHM?
A Uh-huh (affirmative expression), that's fine.
Q And her anomaly?
A Correct.
Q Resulting in an arrhythmia, right? That's what you believe happened to Harmony?
A Correct.
Q Okay. However, you agree with me you cannot exclude nor rule out the possibility that mitragynine contributed to the arrhythmia that caused Harmony's death?
MS. CONGER:

Object to form.

THE WITNESS:

More likely than not, I cannot say that it didn't.

BY MS. HICKMAN:

Q Okay. And this is the one time I'm not asking "more likely than not." What I'm saying is it's possible that mitragynine -- you can't say that mitragynine had absolutely nothing to do with Harmony's death?

MS. CONGER:

Object to form.

BY MS. HICKMAN:

Q Correct?

A The question is: I cannot say that it abs -- that it's -- say that one more time.

Q Yeah. You cannot say -- actually, strike that question. I don't like that question. As we sit here today, you cannot rule out that mitragynine is a possible contributing factor to the arrhythmia that caused Harmony's sudden cardiac death?

MS. CONGER:

Object to form.
